

ENTREPRENEURIAL SPIRIT

EPIC TECHNOLOGY GROUP

When businesses shift from traditional modes of operation and management, to more modern and technology oriented alternatives, the transition is widely referred to as digital transformation or disruption – an important trend that is impacting businesses across all industries.

These transformations are driven by innovative technology, consumer behaviour and market demand, as well as environmental factors to name a few. In this sense, successful transformations are crucial to ensuring that businesses can enhance their processes, introduce new and improved products and services to the market, improve efficiency and drive profitability.

Not only does this enable corporates to pursue new prospects, it also presents opportunities for entrepreneurs to disrupt established ways of working.

This is the philosophy that drives Epic Technology Group – which is known for its entrepreneurial drive, and being a leader in the domains of fintech, secure electronic payment automation, digital transformation, e-government solutions, workflow management, information systems security and mobile enterprise automation solutions in Sri Lanka.

Furthermore, as an award-winning and recognised technology leader in the region,

Epic operates branches in Singapore, Malaysia and Japan.

Boasting 22 years of experience in strategic technology domains, the group assumes leadership in the secure payment solutions sector, laying claim to a market share of more than 70 percent in the country.

Epic Technology Group is also a pioneering force in deploying mission critical and specialised technology solutions in a number of state enterprises, thereby facilitating efficient and effective citizen services.

Founder and Executive Chairman Dr. Nayana Dehigama believes that entrepreneurs such as himself have a social and ethical responsibility when it comes to strengthening the national economy while empowering others to reach their entrepreneurial potential. As such, he looks to inculcate entrepreneurship in Sri Lankan society in a bid to inspire younger generations to become future entrepreneurs.

Elaborating on how budding entrepreneurs can pursue business growth, he cites the importance of credibility, developing core and distinct competences, and commitment – as well as the creativity of such companies – to navigate their way towards success in turbulent market conditions.

To this end, Epic Technology Group has

worked to differentiate itself in the market by designing state-of-the-art technology solutions for the banking and finance domain, to meet the future needs of specific technology and policy environments.

According to the group, it is on a mission to solve social and enterprise problems, and shape the future of Sri Lanka's state and private sector enterprises through innovative technologies.

Moreover, the group has built its image and credibility by proving itself as a forerunner in disrupting conventional banking models. This was achieved by introducing many pioneering initiatives to broaden and diversify the local banking and financial services landscape through the adoption of innovative technology-based solutions.

The group's innovations are not limited to the financial services industry; they have served to digitally transform the competitive landscapes of various sectors. Its continuously growing clientele from an array of sectors, and an unprecedented number of local and global accolades, are ample evidence of the group's dominance in its field of expertise.

Be it an innovative product, process or channel, Epic Technology Group says it aims to set benchmarks and standards that others aspire to follow.
